

ANIMAL TRAVEL HARNESS AND RESTRAINT SYSTEM

ABSTRACT

An animal restraint system (40) comprises an animal travel harness (10), having straps (11-16) adapted to fit around the neck (21) and upper body (25) of an animal (20) to be restrained; a generally circular belt (42), adapted to be secured to an upright portion (43) of a motor vehicle seat (44); and a pair of side linkages (41) for connecting the harness (10) to the belt (42). The harness (10) is provided with a pair of fixing points (27) at either side thereof, while the linkages (41) are provided at either end thereof with engagement 10 clips (49) adapted to connect one end of each linkage (41) to one of the fixing points (27) on the harness (10), and the other end of each linkage (41) to a similar fixing point (47) on the belt (42).
